

MySQL Assignment – 7

Important Note:

Before starting this assignment, make sure AUTOCOMMIT is OFF.

Use the following command:

```
SET autocommit = 0;
```

You can check the status using:

```
SELECT @@autocommit;
```

Q1) Start a transaction and insert a new member record into Member table.
Save the changes permanently.

Q2) Start a transaction and insert a new book record into Books table.
Undo the insertion using rollback.

Q3) Start a transaction and update Penalty_Amount of a member.
Create a savepoint before update, then rollback to the savepoint.

Q4) Start a transaction and perform the following steps:
- Issue a book to a member (insert into Issue table)
- Update the Max_Books_Allowed count of that member
Commit the transaction only if both operations succeed.

Q5) Start a transaction and perform the following:
- Update the cost of a book
- Create a savepoint
- Delete one issue record
Rollback only the delete operation using savepoint.

Q6) Demonstrate that after COMMIT, rollback cannot undo the changes.

Q7) Demonstrate that SAVEPOINT allows partial rollback inside a transaction.
